

Continue

Ben Stockton / How-To Geek iTunes may be dead on macOS, but it's still alive and kicking on Windows. Migrating away from iTunes is recommended, but if you still want to sync your existing iTunes music collection with Android, you can by following these steps. You have a few options to choose from. You can use the Apple Music app on Android, transfer your files manually, or use third-party apps like doubleTwist Sync to keep your music collection correctly synced. Transfer iTunes Music to Android Using Apple Music With Apple's focus now on Apple Music, iTunes is being left behind. There isn't an iTunes app for Android, but Apple does offer an Apple Music app on Android devices. You can sync your iTunes music collection to Android using the Apple Music app. You just have to ensure that iTunes on your PC and the Apple Music app are both signed in using the same Apple ID. You also need to be a current Apple Music subscriber. Start by opening iTunes on your PC and clicking Edit > Preferences. In the "General" tab, make sure the option for "iCloud Music Library" is enabled and then click "OK" to confirm. If you need to manually begin syncing songs to your iCloud storage, click File > Library > Update iCloud Music Library. You may need to allow some time for your entire library to sync to iCloud. Unfortunately, iTunes doesn't have an obvious progress bar showing how long it takes for this process to complete. Once your iTunes library is fully synced to iCloud, open the Apple Music app on Android and tap the "Library" tab at the bottom. Your iTunes music collection will be listed here. Tap one of the relevant tabs such as "Artists" or "Songs." Press on one of the songs or artists to begin playing your music. If you want your music available for offline playback, press the download icon in the "Songs" tab or in individual "Album" listings. Manually Copy Your Music Files from iTunes to Android Unfortunately, Android doesn't fit well into the Apple ecosystem. While iTunes will sync music files to iOS and iPadOS devices, it won't do the same with Android devices. You'll need to manually copy your music library to Android instead. RELATED: How to Copy Music to Your Android Phone There are plenty of methods for doing this, including transferring files over a direct USB connection between your PC and Android, by using cloud storage like Google Drive, or by using a flash drive with a suitable USB OTG adapter. If you're transferring your iTunes music to Android over a direct USB connection, and assuming your iTunes music is being held in the default iTunes music folder, open Windows File Explorer and head to the "C:\Users\%Music%\iTunes\iTunes Media" folder. Replace with your user account folder. From here, select the folders carrying your music files and then right-click and hit "Copy" or press Ctrl+C. View your Android device in Windows File Explorer. Choose a suitable location on your device and then paste your copied iTunes folders to that location by pressing Ctrl+V on your keyboard or right-clicking and selecting the "Paste" button. Once copied, use a third-party Android music app to play your music collection on your Android device. Transfer Your Music Using doubleTwist Sync If you're looking for an easier method to transfer music files between iTunes and Android, an alternative to manual file transfer is doubleTwist Sync. This software for Windows bridges the gap between Android and iTunes. It lets you sync your music collection between Android devices and iTunes in both directions. New music files on your Android device will sync to iTunes and vice versa. It will also work over Wi-Fi, allowing you to transfer your music files without needing a direct USB connection. Start by downloading and installing the doubleTwist software to your PC. Once you open doubleTwist Sync, you'll be asked to connect your device over USB or use the AirSync app to connect over WiFi. AirSync isn't free, so the cheapest method is to connect your device using USB. Once you connect your Android device, doubleTwist will display used and available space on your device. Click the "Music" tab on the top menu. If you want to sync files from iTunes to Android, click the "Sync Music" checkbox. You'll also need to click the checkboxes for the listed subcategories, including "Albums" and "Artists." If you also want to sync files from Android back to iTunes, click the "Import New Music and Playlists" checkbox. When you're ready to begin syncing your files, click the "Sync Now" button. Your iTunes music files will begin transferring to your Android device, while any missing music files on your Android device will transfer to your PC to join the rest of your iTunes collection. Once this process is complete, you can then begin playing your music on both your PC and your Android device using a suitable music playback app. Google Play Music and YouTube Music We've recommended Google Play Music in the past as an option for copying music to Android. Unfortunately, YouTube Music is now the default music app on Android devices, with Google Play Music soon to be discontinued. With that in mind, we no longer recommend you use the Google Play Music Manager as a way of migrating your music files from your PC to Android. At present, YouTube Music doesn't come with a Google Play Music Manager equivalent. If you want to manually sync your iTunes collection to Android, it's better to use the Apple Music app, transfer your files manually, or use a third-party method like doubleTwist instead. iTunes is loved by many and is great for managing your music library. You can even sync your iPhone, iPod and iPad with your iTunes library so that you can access all your music on any device. Any, except Androids... If you have an Android phone, you'll know that you can't sync your iTunes library with it - iTunes doesn't allow it. However, all is not lost! This article will introduce you to 3 methods you can use to transfer music from iTunes to Android. Quick jump to each method using the links below: Droid Transfer Manual music management Google Play Music Comparison & Summary Method 1: Droid Transfer First up is the all-in-one tool that will cover all your Android management needs - Droid Transfer. This popular tool provides the ability to copy Music, Messages, Contacts, Photos and more from Android to PC. It even lets you sync music from iTunes to your Android. Unlike other methods, Droid Transfer will let you know exactly what music is in iTunes and what is on your Android, so you don't have to worry about losing or duplicating tracks. Here's how it's done: Launch Droid Transfer on your PC. Open the free Transfer Companion app on your Android. Connect your Android to Droid Transfer using WiFi or USB. Click the Music section of Droid Transfer. Hit "Sync iTunes". Click "Copy tracks to Android". The free trial of Droid Transfer allows you to transfer 100 tracks FREE. More info on Droid Transfer Transfer Companion: Droid Transfer: Receive an email with a link so you can download the free trial on your computer: Note: We respect your privacy. We won't share your Email address with anyone else, or send you spam. When you click "Sync iTunes", Droid Transfer will scan your iTunes library and let you know what tracks are in iTunes but not on your Android, and what tracks are on your Android but not in iTunes. You can use this information to copy only the tracks you are missing from device to device. If you require even more control over exactly which tracks are copied, you can use the "Advanced Mode". Now you can tick each track you would like to copy and where to. Copy all songs, selected songs, selected artists or selected albums - the choice is yours! You can transfer files with Droid Transfer using a USB connection, or even wireless with WiFi! See Droid Transfer in action: Our second method doesn't have the intuitive user interface and robustness of the Droid Transfer app, however, if you don't mind rolling up your sleeves a little, this method can be great! You don't need any third-party apps for this method - only your Windows File Explorer. Here's how to manually transfer music from iTunes to Android: Connect your Android phone to your PC. Choose to use your device in Transfer Mode (may be called MTP). Open File Explorer and navigate to your Android device's music folder. Open a second File Explorer window and navigate to your iTunes music. You can open a second File Explorer window by right clicking the File Explorer icon in the toolbar and clicking "File Explorer". Drag and drop tracks from iTunes to your Android! By default, iTunes music files can be located at: your username (or This PC) > Music > iTunes Media > Music. You can drag and drop artist folders or single tracks from one window to another (iTunes to your Android device), or you can select all the music you wish to copy from iTunes, right-click > Copy, then select your Windows File Explorer window showing your Android music and right-click > Paste. Method 3: Google Play Music Our final method is for those who would like to access their music on multiple devices and/or need to save space on their Android phone. Google Play Music allows you to store up to 50,000 tracks from your music collection - free. Once you've uploaded music to Google Play Music, you can access and listen to it on any Android, iOS or web device you may be using, if you log in to the service. This service is great because you do not have to store your music files on your device itself, potentially saving huge amount of storage space. However, this does mean that you'll need an internet connection to access and listen to your music (and if you're not using WiFi, it could be costly for you to stream lots of music). Let's see how you can upload your iTunes music to Google Play Music: Go to the Google Play Store in your web browser. Click through Music > My Music > Add Your Music. If you do not already have the browser extension, you'll be prompted to install it. Next, head back to Google Play Music in your browser and hit "Add My Music". Click "Select from your Computer" and navigate to your iTunes Media folder. Select the music you'd like to upload from iTunes to Google Play Music, then click open to upload. Alternatively, you can drag-and-drop music from the iTunes media folder to this window. So, we have covered 3 different methods you can use to transfer music from iTunes to your Android mobile device. Each method has its strengths, so different methods may better suit different people's requirements. Let's take a look at the comparison to help you decide which method may be best for you. Features Droid Transfer Manual Management Google Play Music Transfer music from iTunes to Android ✓ ✓ ✓ Local transfer (using PC / USB) ✓ ✓ ✘ Wireless transfer (using WiFi / browser) ✓ ✘ ✘ Detect which music is in iTunes and on Android for quick and efficient syncing ✓ ✘ ✘ User interface ✓ ✘ ✓ Music Storage Local Android Storage Local Android Storage Cloud Storage Extras Transfer other files Messages, Photos, Calendars, Contacts, Call Logs, Files, Photos, Files. ✘ Stream new music ✘ ✘ ✘ Cost \$30.00 / one-time payment Free \$9.99 / per month, or free limited account All benefits and limitations considered, we can recommend certain methods for certain requirements. If you are looking for an all-in-one tool for managing all files between Android devices and your computer, you can't go wrong with the Droid Transfer app. It's rich in features, easy to use and offers both USB and WiFi transfers. Droid Transfer knows exactly which music you need to sync to update your music libraries. For basic music transfers; say you want to transfer a specific song from iTunes to Android, or batch transfer all iTunes music to your Android, you can quickly use Windows File Explorer. If you're in a position where you are running out of space on your Android, you may want to consider moving your music library to the cloud. In this case, you can upload your music to a service like Google Play Music. There are different levels of subscription here, so check out the different plans to see what suits your needs.
